

Figure 1
Coughing number when swallowing 20ml samples for patients at different grades as assessed by the Water Drinking Test.

Figure 2 - Relationship between IDDSI Level and Water Drinking Test Grade

Figure 2 shows a strong positive correlation between the Water Drinking Test Grade and the IDDSI Level. The regression line indicates that as the Water Drinking Test Grade increases, the IDDSI Level also increases, with an R-squared value of 0.814.
